# SOFTWARE AND TECHNOLOGY

Our attorneys have a deep understanding of the legal and business issues that arise in the rapidly evolving field of software and technology, ranging across software development and transfer, cloud computing, open source components, e-commerce, hosting, domain name protection, and many other IT contracts. Whether you are a buyer or a provider of web- and cloud-based assets, we can provide guidance and strategies that leverage these technologies toward your business objectives. We work closely with clients to structure customized solutions in view of our client's technology position and needs, and we negotiate and prepare a wide variety of legal documents to protect and commercialize our client's technology.

## EXPERIENCE

- Represented a regional bank in negotiating rights to core processing software.
- Represented a public automotive dealer in negotiating rights to an enterprise management platform.
- Represented an international digital communications provider in negotiating favorable terms for an enterprise management software platform.
- Represented an independent renewable energy service provider in negotiating rights to power plant management software.
